

KiwiSaver Performance Survey March Quarter 2011

Markets ignore natural disasters and economic uncertainty as KiwiSaver funds produce another quarter of strong results.

Chris Douglas
| 27-Apr-11 |

Morningstar has released its quarterly KiwiSaver Performance Survey, designed to help New Zealand investors assess the performance of their KiwiSaver superannuation options.

The accompanying tables show KiwiSaver fund returns for the three and six months and one, two, and three years to 31 March 2011. There are no fund additions this quarter, but there has been some corporate activity. Fisher Funds announced its plans to purchase the Huijich KiwiSaver business on 31 March 2011. To see the effect this has had on Fisher's assets, check out the Assets Under Management section of the survey.

Market Overview

Share and fixed income markets posted strong results during the first quarter of 2011. This was despite a host of bad news which included the Christchurch earthquake, the earthquake and tsunami in Japan, continuing uncertainties around debt levels in Europe, and reports that the United States will need to enter a third round of quantitative easing. It's therefore perhaps surprising that almost all asset classes enjoyed strong performance, which also flowed through to the performance of KiwiSaver funds.

All the major asset classes produced positive results for first three months of 2011, continuing the solid showing in 2010. The NZX50 Index of Kiwi shares was up a very reasonable 3.95 percent over the March quarter, although the New Zealand sharemarket lagged most global counterparts. The Australian market produced a 6.66 percent return over the three months to 31 March 2011. Global sharemarkets overall were up an impressive 7.33 percent over the same period. While both domestic and global bond markets trailed sharemarkets, they still produced returns of 2.21 and 0.50 percent respectively. Global listed property, the best-performing sector in 2010, continued its performance run in 2011, up an impressive 9.14 percent over the three months to 31 March 2011.

Fund Manager Results

The strong returns from sharemarkets resulted in KiwiSaver funds with higher exposures to growth assets (shares and property) outperforming those with more invested in income assets (cash and fixed income) over the March quarter. Single-sector equities and Multi-Sector Growth and Aggressive options were the best performers over the first three months of 2011, again continuing the trend from 2010.

What will be especially interesting for regular readers is that despite the continued strong market performance, last year's best-performing KiwiSaver funds were not necessarily the top performers for the March quarter. **ASB KiwiSaver, Fidelity KiwiSaver, Grosvenor KiwiSaver, and Westpac KiwiSaver** were the best-performing multi-sector options in the first three months of 2011.

Looking out over three years is of course a better indicator of a fund manager's performance record. But there still are not any clear patterns, given the highly-volatile performance period from 1 April 2008 – 31 March 2011. The best-performing multi-sector fund has been **Fisher Funds Growth KiwiSaver**, streaks ahead of peers over a three-year period. Aon has the number two and three spots, **Aon KiwiSaver OnePath Balanced** and **Aon KiwiSaver Russell Lifepoints Conservative** the next best performers. **Fisher Funds Growth** resides in the Multi-Sector Aggressive category, while the aforementioned Aon KiwiSaver funds are in the Multi-Sector Balanced and Conservative categories respectively. This illustrates how the last three years have produced a host of investment opportunities for fund managers, regardless of the particular fund's risk profile.

Of the single-sector options, global share funds led the charge over the March quarter and were among the best-performing KiwiSaver options. This is not surprising given that world sharemarkets were north of 7.30 percent on aggregate for the period. The strongest performances were generated by **SIL KiwiSaver International** and **SIL KiwiSaver Australasian**, alongside **Grosvenor International Share**. But top of the list again was **Fidelity KiwiSaver Options Kiwi**, which was the best-performing KiwiSaver fund on our database over the quarter and remains the best performer over the three years.

These single-sector funds represent very different choices ranging from lower-risk fixed interest to more volatile equities and derivatives-based vehicles. Investors who allocate here need to do so fully-aware of the risks.

Why is Asset Allocation So Important?

Asset allocation, or the mixture of underlying asset classes, is one of the most important decisions to make when selecting a KiwiSaver option. (The other is fees.) Table 1 over shows asset allocation data for the KiwiSaver funds in the Multi-Sector Balanced category. These are the options which have 41.0 – 60.0 percent in growth assets, taken from a fund's stated long-term strategic asset allocation in its Investment Statement.

We also collect regular asset allocation data from fund managers to see how active this decision is. As the table shows, not all fund managers are willing to provide this data to Morningstar. However, we believe that it is critical information for anyone wanting to understand the nature of a KiwiSaver fund, its risk/return characteristics, and likely volatility.

Only a handful of fund managers have had exposure to the best-performing sector of the past 12 months, listed property. The 'Listed Property' column in Table 1 over includes both New Zealand and global listed property. What it doesn't show, though, is that **ASB KiwiSaver Balanced** and **FC KiwiSaver Tracker Balanced**'s 9.92 percent exposure is all in global property, which has helped both options to produce top-quartile results over the past 12 months. Not having exposure to this asset class and having a high New Zealand bias would have resulted in poor results, as global markets have tended to outperform the domestic market. (Hedging of offshore holdings is another important issue, but we'll save this one for another time.)

As Table 1 shows, while most of these Multi-Sector Balanced funds have 40.0 – 50.0 percent of their money in income assets, and the remainder in growth, the divergence within each sector can be substantial, and can go a long way to explaining performance differentials between funds. (The 'Other' column is a mix of hedge funds, alternative assets, and unlisted infrastructure exposures.)

Table 1: Multi-Sector Balanced KiwiSaver Fund Asset Allocations by Asset Class

After-Tax Returns Are Coming: Watch This Space

Morningstar will be producing after-tax returns for all KiwiSaver funds on our database from next month. We will continue to produce our KiwiSaver survey on a gross of tax, net of fee basis, but will enable readers to compare this with the after-tax performance of each vehicle. Our Data team has been finalising our methodology document and working with the industry on the appropriate framework. This is now almost complete. You can read about this in the KiwiSaver Performance Survey methodology document attached.

Assets Under Management

KiwiSaver assets on the Morningstar database have grown from NZ\$954.10 million at 30 June 2008 to NZ\$8.07 billion at 31 March 2011, a phenomenal growth rate for the New Zealand funds management industry.

The latest major development has been Fisher Funds' acquisition of the Huijich KiwiSaver business. According to our fund size figures, the combined business will have NZ\$420.10 million in KiwiSaver assets, almost doubling the size of Fisher's KiwiSaver assets. This did little, however, to change the absolute rankings by assets of KiwiSaver provider, although Fisher Funds is now just short of a number of default providers. OnePath and ASB remained the dominant players at 31 March 2011, with 45.0 percent of KiwiSaver assets between them. After AMP and Westpac was a tight group hovering about six to seven percent.

About This Survey

This survey groups KiwiSaver options according to their mix of income and growth assets, known as their 'asset allocation'. This is one of the most important decisions to make when saving for retirement income. The term 'income assets' refers to cash and fixed interest securities which generally produce stable and reliable returns, but offer little opportunity for long-term capital growth. Returns from 'growth assets' such as property and shares will be erratic – as recent market volatility has demonstrated – but have over time shown greater capacity for increasing in value. The mixture of income and growth assets is the major determinant of potential return and volatility.

Investors may notice differences between the returns published in this survey and those they see in other sources. There are several possible reasons for this. Firstly, the returns published here are all after fees, but before tax. Secondly, we take the associated tax credit into consideration when calculating and publishing these returns, while some fund managers base their published performance figures on month-end unit prices only. ■■

KiwiSaver Performance Survey - Returns to 31 March 2011

Please note:

- Past performance is not a guide to future performance. This year's best performers can easily be next year's worst.
- Understanding your risk profile, and the mix of growth and income assets is critical.
- Fees are the one constant that will always eat away at your returns. Take a close look at the cost of your KiwiSaver Scheme.

Returns are before tax and after fees. Estimated Total Fee is the sum of the ongoing Management Fees, the Trustee Fees, and Administration fees. The performance for AMP, AXA, Forsyth Barr and Tower reflects fees that are charged as a percentage of your account balance and paid by cancelling units. Please contact Morningstar if you require clarification. Additional fees are dollar-based Administration or Membership Fees payable in addition to the Total Fee, and are not reflected in the fund's performance. We have adjusted the performances of the Huljich Wealth Management funds reported in this survey. We have elected to change the start date of the funds to 31 October 2008 as a result of the additional payments made by Peter Huljich in December 2007 and October 2008. We have taken this action to improve the validity of cross-sectional analysis undertaken using our database. More specifically, investment returns should solely reflect investment activities. ** - Indicates a median rather than a mean. (a) Total Fee is a minimum of \$40 or 0.85 percent dependent upon account balance. Und. = Undisclosed. * - Indicates Performance numbers supplied directly from the Provider rather than calculated independently by Morningstar.
